

Letter of Support Berta Martinez,

Berta was my student in computational physics where I did not really notice her. She got an 6.2/10 which makes her average in the class. Afterwards I supervised her TFG on the solution of the Schrodinger equation on the IBMq machines and I was very happy with her performance. She is hard working and was fairly independent and motivated. Her TFG was actually pretty good in the end. She took advise properly, also she writes english very well. She was nice to interact with. Out of the many (over 30 TFG+TFM) supervised, she would be top 25%,
I support her application
