

Barcelona, 8<sup>th</sup> April 2021

To whom it may concern,

I have known Pol Alsina for more than a year now in my capacity as a teacher in the *Physics Faculty* of the *University of Barcelona*. He took my course *History of Physics* (spring semester 2020), and currently he is studying *Historical Experiments of Quantum Physics/Laboratory of Modern Physics* (spring semester 2021).

Pol's disposition in my classes was and is excellent. He is always an active participant with an exemplary attitude towards the subject and the development of the class. He stands out both for his motivation and participation in debates and seminars, and at the end of the course, he acquired quite good mastery of the subject. In the course of *History of Physics* he carried out a meritorious historiographical essay on a paper by Mario Bunge on relativity and philosophy. I have a very good impression of his ability as a future postgraduate student, and I can guarantee his high capacity to work on his own. Particularly, I consider that Pol's academic skills allow him to grasp new concepts and procedures in depth, especially those related to theoretical physics.

I believe he will be able to perform an estimable work as a postgraduate student in a Master in quantum science and technology. His interest and command of theoretical physics makes that master programme highly attractive for his career.

If I can provide you with any further information about him, please do not hesitate to contact me.

Sincerely  
Enric Pérez Canals  
Associate Professor
